

Building a task management application for CONGFU company.

Giàng Seo Chua

Abstract: This topic aims to design and implement an electronic application system for efficient work management at CONGFU Company. The context for proposing this topic is based on the practical need to improve work productivity through the digitization of processes. The objective is to build a solution that optimizes communication and work monitoring between departments within the organization, while enhancing information accessibility and automating project management procedures. The research methodology combines both empirical methodology and mobile application design models. The significance of this topic is to provide a practical solution that can be widely applied in technology organizations, while contributing to the development of the electronic project management industry.

Keywords: Job management application, CONGFU Company, Work productivity
