

Research and development of an online medical appointment booking website system for An Phu General Hospital.

Nguyen Thu Cuc

Abstract: In the context of increasingly advanced healthcare, the issue of effectively managing the appointment scheduling process at An Phu General Hospital has become an urgent concern. This topic focuses on building and deploying an online medical appointment booking website system aimed at optimizing access to healthcare services, reducing the workload for hospital staff, and improving service quality for patients. The research methodology includes both analyzing actual needs and designing and developing the web application following the best principles of modern technology. The expected outcome of this topic is the creation of an efficient website system that fully meets information and user interface requirements, making a significant contribution to improving the quality of medical services at the hospital.
