

Building an English learning application with AI integration on Android

Nguyen The Dai

Abstract: In the context of education increasingly developing with the support of technology, building an English learning application integrated with artificial intelligence (AI) for the Android platform aims to provide a personalized and effective learning experience. This topic will study the theory of AI in language education along with the design and implementation of the application system. Through practical testing, the project hopes to contribute an innovative solution for foreign language learning, while affirming its applicability and practical value.

Keywords: Android application, Artificial Intelligence (AI), English learning, Online education, Graduation project
