

Building a motel management website for landlords ensuring information security.

Nguyen Thanh Dat

Abstract: This topic proposes building an online boarding house management system to support landlords in effectively monitoring and managing their rental rooms. The current context shows an increasing demand for high-quality boarding houses with ensured information security features. The objective of the research is to develop a web system that meets this requirement. The research methodology includes both theoretical and experimental analysis to design a user-friendly interface along with effective administrative functions. The expected results of this topic will bring important technical and social contributions, improving the quality of boarding house services while ensuring information security for both landlords and tenants.
