

Building software to support smart study planning.

Vy Duc Dat

Abstract: This topic aims to meet the need for optimizing the learning process by building a software system that supports intelligent study planning. By integrating advanced technologies and data analysis, this system will help students plan their studies more effectively based on their personal schedules. The research methodology includes both experimentation and application deployment, aiming to ensure practicality and wide applicability. This topic hopes to contribute to the development of the field of information technology education.

Keywords: Smart learning, Learning support software, Study plan, Educational information technology
