

Building a Website for managing and reporting work at the Center for Science, Technology and Innovation of Tuyen Quang Province

Ta Ba Minh Duc

Abstract: In the context of the rapid development of science and technology, the management and effective reporting of the activities of the Center for Science, Technology and Innovation in Tuyen Quang province have become more important than ever. This project aims to build a professional website to support internal management and external communication. The research method combines web design theory with practical application deployment. The project is expected to improve operational performance, enhance the ability to update information quickly and accurately for all stakeholders, from employees to partners and the local community.
