

Developing a website system for managing mobile catering services integrated with AI menu consultation.

Hoang Ngoc Duong

Abstract: In the context of increasing demand for mobile catering services, this topic focuses on developing a website system to manage and optimize catering services. The research aims to build an AI-integrated solution to advise on menus suitable for customer needs. The research methodology includes both theoretical and experimental aspects, focusing on the implementation of artificial intelligence applications in the field of catering service management. The topic is expected to contribute a useful application solution to the food service industry, enhancing service quality and customer experience.

Keywords: Management website, Mobile catering service, AI menu consultation, Artificial Intelligence (AI), Application in service management
