

Building a human resource management system for Bao Lam Express Company.

Linh Truong Giang

Abstract: In the context of rapidly developing information technology, building an effective human resource management system is essential for Bao Lam Express Company to enhance work efficiency and resource management. This study aims to analyze the enterprise's requirements, design, and implement a system that automates human resource management processes through data-driven HR management technology. The research methodology includes collecting information from relevant documents, interviewing employees and managers, and then deploying software based on the principles of modern human resource management. The expected results will provide the company with a more effective HR management support tool, while affirming its practical applicability and contribution to the field of resource management.
