

Building a course management website for AJIN Chinese language center

Do Thi Thu Hoa

Abstract: In the context of increasing demand for Chinese language learning, this topic aims to solve the problem of improving management efficiency and customer service at the AJIN center by building a course management website. By applying theoretical research methods combined with experimentation, the topic will focus on designing a user-friendly interface, optimizing the content management system, and implementing a solution integrating modern technologies. It is expected that this website will not only enhance service quality but also expand learning opportunities for a wide range of customers.

Keywords: Management website, Chinese language course, AJIN center, user interface, content management system
