

The IT Faculty Personnel Management System uses web API and Mobile App.

Nguyen Xuan Hung

Abstract: In the current context, effective human resource management is a critical issue for information technology (IT) organizations. This topic focuses on developing a human resource management system for the IT department using a web API and Mobile App. The objective of the research is to design and implement this system to enhance management efficiency, thereby improving the quality of personnel work. The study combines theoretical and experimental methods to ensure the accuracy and suitability of the proposed solution. The expected results of this research not only provide a useful system for the IT department but also contribute to the development of effective human resource management technology.
