

Develop an online course management website (E-Learning).

Lã Dương Kiều

Abstract: In the context of education increasingly shifting to online formats, developing an online course management system has become extremely important. This project aims to build an effective web platform for managing E-Learning courses. Through theoretical and experimental research, the project will focus on designing a user-friendly interface, integrating content management functions, and flexible access control. The expected outcome is to provide an optimal technological solution for schools and educational organizations, contributing to improving the quality of online training.
