

Building the STAR ENGLISH English training system integrated with artificial intelligence.

Le Hoang Lan

Abstract: In the context of the increasing demand for English learning and the strong development of information technology, this topic focuses on building the STAR ENGLISH English training system integrated with artificial intelligence. The project aims to solve the problem of enhancing learning effectiveness by combining theory with practice through the use of AI to analyze and personalize the learning process. The research methodology includes both theoretical aspects of designing an educational system with AI technology and practical application deployment to evaluate the system's effectiveness. The expected results will significantly contribute to improving the learning experience and English learning outcomes, while providing a modern solution for language centers.
