

# **Building the ProSV learning management application for students**

**Tran Mai Lan**

**Abstract:** This topic aims to identify and analyze existing issues in the student learning management process at universities. With the goal of building the ProSV mobile application system to support optimizing the learning process, the research has applied a combined approach between theoretical and experimental research. The expected results provide advanced technical solutions for students' personal learning management, contributing to improving learning performance while affirming the applicability and practical value of the topic.

**Keywords:** Mobile application, Learning management, Educational information technology, Students
