

Employee Task Management and KPI Evaluation System

Nguyen Tan Hoang Long

Abstract: In the context of modern enterprises, an effective task management and employee KPI evaluation system is essential to optimize labor productivity. This study aims to build a task management support system based on analyzing requirements from business practices combined with advanced KPI evaluation methods. The research methodology applies a theoretical approach combined with empirical methods to identify and optimize work performance. The expected result is to provide a system-based management tool to effectively support the modern work environment, making a significant contribution to improving the quality of human resource management.
