

# **Building an AI-integrated training center management system to support academic advising**

**Luu Duc Luan**

**Abstract:** In the context of education increasingly focusing on quality and efficiency, this topic aims to research and develop a training center management system integrated with artificial intelligence (AI) to support academic advising. The goal is to build a comprehensive solution that improves students' learning experiences and enhances educational quality. The research method combines theory and experimentation to ensure practical applicability and effectiveness. The significance of this topic lies in contributing to the development of smart technology in education, creating intelligent management systems that maximize support for the learning process.

**Keywords:** Artificial intelligence, training center management, academic advising, modern education, smart technology
