

Building a website for ticket booking and cinema management in Thai Nguyen

Luu The Minh

Abstract: In the context of information technology development, building an online ticket booking system and managing cinema operations plays an important role in improving user experience and enhancing business efficiency. This topic focuses on designing and deploying a dedicated website for cinemas in Thai Nguyen, ensuring flexibility, safety, and convenience in the ticket booking process and data management. Through empirical research, the system is evaluated based on criteria such as user interface, information processing capability, and system performance. The topic aims to provide a useful solution for the local film industry, contributing to the sustainable development of the cinema market.
