

Building a boarding house management website integrated with an AI chatbot for Q&A; support.

Pham Tra My

Abstract: In the context of increasing demand for finding suitable accommodation and concerns about effective management, this topic focuses on building a web-based boarding house management system integrated with an AI chatbot. The project aims to address the issue by deploying artificial intelligence (AI) technology to automate and support the process of answering frequently asked questions from tenants and landlords. The research methodology includes both theoretical and experimental approaches to ensure the system provides effective and user-friendly solutions. The expected results will significantly contribute to enhancing user experience and reducing management processing time for landlords.
