

Building a website to manage rental rooms.

Kiều Thị Nga

Abstract: In the context of increasing Internet usage demand, building an online room rental management system becomes important to optimize the leasing and management process. This project aims to design and implement a room rental management website, helping landlords easily track rental status and tenants search for and select suitable rooms. The research method combines practical surveys, requirement analysis, and web application programming. The project is expected to bring high business efficiency for landlords and convenience for tenants.
