

Building a website system to support students in searching for information and registering for online courses at a foreign language center.

Nguyen Thi Ngan

Abstract: In the context of increasingly strong educational development with the support of information technology, this topic focuses on building a website system to provide a comprehensive solution for students to search for information and register for online courses at a language center. The main goal is to create a user-friendly interface while optimizing the course search and registration process. The research method applies a combination of website design theory and practical application implementation. The topic is expected to bring great value to the language center by improving work efficiency and student experience.

Keywords: Website system, Information lookup, Online course registration, Foreign language center, Information technology
