

Building a travel support application for tourists visiting Thai Nguyen.

Bui Bao Ngoc

Abstract: The research aims to identify the information needs of tourists when visiting tourist destinations in Thai Nguyen. The project will design and implement a mobile application system that provides detailed information about tours, restaurants, eateries, and shopping locations. The research method combines theory with experimentation to evaluate the application's effectiveness. The goal is to create a solution that helps tourists have a better experience during their visits.
