

Developing a restaurant management application integrated with online ordering for Sunny Food restaurant.

Vu Ngoc Nhi

Abstract: In the modern context, smart restaurant management and enhancing customer experience have become more important than ever. This topic focuses on the necessity of implementing an online ordering application to improve the operational efficiency of Sunny Food restaurant. The goal is to build a restaurant management system that integrates ordering and payment functions while creating a better user experience. The research methodology includes requirement analysis, user interface design, and application deployment following the MVC model. The expected results contribute to the restaurant industry through the development of a modern management solution.

Keywords: Online food ordering application, Restaurant management, Integrated system
