

Building a personal finance management application integrated with a Virtual Assistant for smart income and expense advisory.

Nguyen Minh Phuong

Abstract: In the current context, personal financial management is becoming increasingly important but also challenging for many people. This topic aims to address this problem by developing an application that integrates a Virtual Assistant for intelligent income and expense advisory. Through research, the topic will combine theoretical methods of financial management with practical application deployment on AI technology platforms. This not only provides a useful solution for users but also contributes to the development of intelligent personal financial management systems.

Keywords: Financial management application, Virtual assistant, Smart income and expense tracking, Personal financial management rights, AI technology
