

Building a management website for Sông Quê restaurant integrated with an intelligent advisory assistant.

Tran Thi Phuong

Abstract: In the context of the strong development of digital technology, building a website management system for Sông Quê restaurant not only enhances business efficiency but also creates a better customer experience. This project aims to design and implement an integrated solution with an intelligent advisory assistant to support the management and service processes at the restaurant. The research methodology includes requirement analysis, system design, and experimental web application development. Through this, the project hopes to contribute a useful solution to the food service industry, while also providing suggestions for future improvements.
