

Build an automated blog writing system using AI Agent and Large Language Model (LLM).

Hoang Minh Tam

Abstract: In the context of the rapid development of information technology, automated blog writing using AI Agents and large language models (LLMs) has become a new trend. This topic aims to build an automated blog writing system based on input data, with the goal of generating high-quality content that meets readers' requirements. The research method combines theories of AI Agents and LLMs with experimentation to optimize system performance. The expected result is a useful solution for businesses seeking to automate the blog content creation process, thereby contributing to the advancement of AI technology in the fields of media and advertising.
