

Building a task management and assignment system using Next.js and MongoDB

Nguyen Thi Tam

Abstract: In the increasingly developing context of the Internet of Things (IoT), the requirement for efficient and flexible management of tasks and projects is undeniable. This topic focuses on building a task management and assignment system using Next.js combined with MongoDB to address the issues of work organization, authorization, and data storage quickly and efficiently. Through the research and deployment of a practical application, this topic aims to provide a flexible project management platform that supports businesses and individuals in optimizing work and enhancing productivity.

Keywords: Next.js, MongoDB, project management, IoT, authorization
