

Building an online story reading application with integrated community interaction features.

Luan Duc Thien

Abstract: In the context of increasing demand for entertainment and community interaction, this topic focuses on building an online story-reading application integrated with social interaction features. The objective of the topic is to develop a system that allows readers to participate in discussions and share their feelings about story content through a community network. The research methods applied include both theoretical and experimental approaches, aiming to ensure that the application not only meets entertainment needs well but also contributes to promoting online cultural exchange. The expected result is a convenient, easy-to-use system with high interactivity, which can bring significant benefits to both developers and users.

Keywords: Online story reading application, Community interaction feature, Cultural exchange system
