

Design and build a job connection platform for students and employers

Le Cong Thuong

Abstract: In the context of an increasingly competitive labor market, this topic focuses on designing and deploying a digital platform to effectively connect students with employers. The main objective of the project is to address the lack of information and communication between the two parties through an intelligent system that integrates multiple features such as job search, career counseling, and personal profile management. Through both theoretical and experimental research, the project aims to provide a useful solution with high scalability, making a significant contribution to the field of supporting students in their job search process.

Keywords: Connection platform, Student jobs, Information technology, Online recruitment, Personal profile management
