

Build a sales website and order management system for a coffee shop.

Tran Thi Thu Trang

Abstract: In the increasingly competitive context of the coffee market, building an online management system has become an urgent requirement to enhance business efficiency. This project aims to develop a specialized sales and order management website for coffee shops. Through overall research and application design, the project will apply modern technical methods combined with experimentation to build a system that meets requirements for a user-friendly interface, efficient order management functions, and high security. The project's results will not only help improve the sales and management processes of coffee shops but also contribute to the overall development of the coffee industry.
