

Building an AI system to automatically convert learning documents into presentation slides.

Nguyen Thi Thanh Tu

Abstract: In the context of modern education, converting learning materials into effective presentation slides is an urgent requirement. This project aims to build an AI system capable of automating this process through the use of Machine Learning and Natural Language Processing (NLP) technologies. Through a combination of theoretical research and experimentation, the project hopes to provide a useful solution for lecturers and students. The expected outcome of the project is to create a system that can enhance teaching and learning performance by automating the conversion of text into presentation slide content.
