

Building a restaurant management system integrated with AI for dish recommendations.

Nguyen Van Tuan

Abstract: In the context of rapidly developing information technology, the application of artificial intelligence (AI) to restaurant management has become a modern trend. This topic focuses on building a restaurant management system integrated with AI for dish recommendations to improve customer experience and restaurant operational efficiency. Through theoretical research combined with experimentation, the topic aims to solve the problem of optimizing the ordering process by analyzing customer data and providing accurate recommendations. The expected results not only enhance service quality but also contribute to the development of the modern restaurant industry.

Keywords: Restaurant management system, Artificial Intelligence (AI), Order suggestion
