

Building a real estate management and trading website for DXT company.

Dao Xuan Tung

Abstract: This topic aims to meet the digital development needs of DXT company by building a website system specializing in real estate management and trading. The main objective is to create a convenient and efficient online platform for both property owners and customers searching for real estate. The research methodology includes analyzing technical and business requirements, designing a user-friendly interface, and deploying the web application on a modern platform. The expected outcome of the topic is to provide a practical solution for DXT company to enhance competitiveness and improve customer experience.

Keywords: Real estate website, online management, digital technology
