

Developing a Chinese learning website through games

Triệu Yến Vi

Abstract: In the context of the booming development of online education, choosing the topic 'Developing a Chinese learning website through games' holds significant practical value. The topic aims to design and build an interactive educational web system that helps improve learners' language skills through entertainment activities. Through research, the topic applies a method combining Chinese teaching theory with game technology applications. The expected results will contribute to enhancing learning effectiveness and interest in foreign language learning.

Keywords: Educational website, Chinese language, Game technology, Online education, Language skills
