

Develop a CineVault online movie streaming web system using Flask and MongoDB following the MVC model.

Van Minh Code

Abstract: In practice, the demand for online movie streaming is increasing, requiring effective movie content management solutions. This topic focuses on developing the CineVault online movie streaming web system with the goal of building a user-friendly interface and comprehensive movie content management functionality. Through theoretical research combined with experimentation, the topic applies the MVC model with Flask as the application framework and MongoDB for storing movie information. The project aims to provide a flexible solution for online movie streaming while contributing to the development of students' web programming skills.

Keywords: Web system, online movie streaming, Flask, MongoDB, MVC model
