

Design and deploy a Next-Generation Firewall (NGFW) system using FortiGate for small businesses.

Trieu Huu Khanh

Abstract: In the context of increasingly valued network security, this topic focuses on designing and deploying a Next-Generation Firewall (NGFW) system based on the FortiGate platform to meet the needs of small businesses. The main objective is to build a comprehensive security solution that enhances the ability to effectively prevent and detect network threats. Through a combination of theoretical research and experimentation, this topic aims to provide a flexible and easily integrable NGFW system, thereby making a significant contribution to the field of network security.

Keywords: Next-Generation Firewall, FortiGate, small business, network security, system deployment
