

Design and deployment of a network system for Tuan Dao Secondary School.

Phun Thi Thuy

Abstract: In the modern context, ensuring the operational efficiency of network systems in educational institutions is a necessary issue. This project aims to design and deploy a reliable network system for Tuan Dao Secondary School. Through theoretical research on computer networks and practical experimentation at the school, we apply an integrated method of research and application deployment to build an optimal solution. The expected results of the project will bring high performance in information communication and improve the overall quality of education.
