

Unified Learning Content Manager

Pham Tuan Anh

Abstract: This topic focuses on developing an Integrated Learning Content Management System (ULCM) to address the issues of fragmentation and lack of interoperability among educational learning resources. The objective is to build a unified system for organizing, managing, and delivering learning content across various educational platforms. The research methodology includes synthesizing knowledge from information management theory and applying empirical practices to develop an intuitive and efficient user interface. The expected outcome is a ULCM system that can enhance the quality of learning materials, support teachers and students in the teaching and learning process, and contribute to modernizing the management workflow of learning content.
