

Design of the 2019 Year of the Pig calendar

Lã Xuân Đông

Abstract: This topic focuses on designing and implementing a 2019 calendar system for the Year of the Pig. The research aims to provide a useful tool for users to effectively track and manage time by integrating features such as important events, holiday storage, and automatic reminders. The method combines practical requirement analysis with application implementation to ensure the product's practicality. The expected outcomes of this topic are to create a scalable utility system that contributes to improving work productivity and daily life.
