

Online newspaper on marine environmental protection through a series of articles about the environmental incident caused by Formosa.

Nguyen Trung Dong

Abstract: In the context of the negative impacts of the environmental incident caused by Formosa company in the central sea of Vietnam, this topic aims to raise community awareness through online newspapers about environmental protection measures. Through theoretical and experimental research, the project will analyze the environmental impact of the incident and propose effective solutions. The expected outcome is a reliable source of information, supporting the development of strategies for sustainable marine environmental management and protection.
