

Online newspaper with image communication of traffic police

Vu Thi Viet Hang

Abstract: This topic aims to research and develop an online newspaper platform specializing in the use of visual communication in the activities of traffic police. The context of the topic arises from the practical need to enhance traffic management and monitoring efficiency through digital technology. The objective of the research is to build an integrated system between digital journalism and visual communication, aiming to provide fast and accurate information about traffic law violations and traffic control activities. The methods applied include theoretical and experimental research to implement practical applications. The expected results will contribute to raising community awareness about traffic safety through digital technology.

Keywords: Online newspapers, visual media, traffic police, traffic management, digital technology
