

Building a smart dictionary application

Đào Duy Cường

Abstract: In the context of the rapid development of information technology, building an intelligent dictionary application has become important to meet the need for quick vocabulary search and comprehension. This topic focuses on designing and implementing an electronic dictionary system with features for suggestion, translation, and automatic vocabulary learning. Through theoretical research combined with experimentation, the topic aims to provide a useful solution for users in educational and professional fields. This is a breakthrough in leveraging modern technology to enhance learning and communication efficiency.

Keywords: Smart dictionary application, Machine learning, Information technology
