

Building a mobile phone sales website using PHP and Laravel

Do Manh Cuong

Abstract: In modern business, building a specialized website system for online sales plays an important role. This topic focuses on developing a mobile phone sales website based on the PHP platform and the Laravel framework. The context of the topic is defined by the market trend shifting from traditional transactions to e-commerce. The main objective is to design and implement a product management system, order processing, and provide an online shopping experience for users. The research methodology includes reviewing academic documents, evaluating existing solutions, and implementing an application to verify the system's effectiveness. The expected results will contribute to promoting the development of the information technology industry in the field of e-commerce.

Keywords: E-commerce website, PHP, Laravel, Product management
