

Exploiting Flutter to build a Chat application on mobile devices

Nguyen Son Duong

Abstract: This topic aims to research and develop a chat system based on the Flutter platform to meet the need for efficient mobile communication. Through requirement analysis and specific goal identification, we will apply Flutter development techniques combined with experimentation to build an intelligent chat solution. The expected result is to provide users with convenient access to chat services across multiple mobile platforms, while contributing to the development of Flutter technology in the field of mobile applications.
