

Build a real-time webchat using Node.js

Vuong Van Ha

Abstract: In the context of the increasingly popular application of daily real-world technology, this topic focuses on building a real-time chat system based on the Node.js platform. The main objective is to research and implement a robust interactive chat interface to meet the fast and efficient needs of user communication. The method combines theoretical knowledge of real-time networking with practical experience in building Node.js systems. It is expected that the completion of this topic will significantly contribute to the development of real-time chat technology, while providing a concrete example of how to apply Node.js in solving practical problems.

Keywords: Node.js, Webchat, Real-time Communication, Real-time Network, Chat Technology
