

Testing the poultry farm management website using Katalon Studio

Truong Hong Hanh

Abstract: This topic focuses on determining the necessity and applicability of testing a poultry farm management system. The goal is to build an automated testing process using Katalon Studio to ensure the reliability and performance of this management website. The applied method includes both theoretical research on web testing and experimental implementation to evaluate effectiveness. The expected result is to improve service quality and enhance system stability, contributing to better poultry farm management.

Keywords: Website testing, Katalon Studio, Poultry farming, Farm management, Test automation
