

Building a search and management system for boarding houses in the Thai Nguyen University area.

Nguyen Xuan Hieu

Abstract: This topic aims to address the issue of managing boarding houses in the Thai Nguyen University area by building an effective search system. The context for choosing this topic is based on the practical needs of students and teachers in finding suitable accommodation. The objective is to create a management system that optimizes the rental process, ensures service quality, and enhances security for both landlords and tenants. The research method combines information management theory with practical application development. The expected result is to provide an effective management solution, contributing to improving the study and work life of students.
