

Laravel Framework application for developing a website selling various types of pastries

Le Duy Hoang

Abstract: In the context of the strong development of e-commerce, this topic focuses on applying the Laravel Framework to build a professional web system for selling cakes. The main goal is to create a user-friendly interface and ensure effective administrative features. Through a combination of theoretical research and experimentation, the topic aims to contribute to the e-commerce field and provide web developers with a powerful, flexible solution. Expected results will include an intuitive cake website with automated order management capabilities.

Keywords: Laravel Framework, e-commerce, cake business
