

Build a food ordering website for Ban Thai Restaurant.

Nguyen Duc Huy

Abstract: This topic focuses on building a website system to serve the business needs of Bản Thái Restaurant. The research context is defined by the strong development of e-commerce in the food service industry, along with the digital transformation trend of local businesses. The objective is to design and implement a web solution suitable for the restaurant's needs, aiming to optimize the sales process and enhance customer experience. The research methodology includes synthesizing knowledge from existing literature on website design and web programming practices, combined with survey and testing methods to ensure the system meets functional and aesthetic requirements. The significance of the topic lies in its ability to provide an effective technical solution for the restaurant, while also contributing to the research field of e-commerce in the local food industry.

Keywords: Food selling website, e-commerce, Ban Thai restaurant
