

# **Building a website for the National Defense and Security Center - Thai Nguyen University using ASP.NET technology**

**Bế Ngọc Khánh**

**Abstract:** In the current context, the use of information technology in the management and operation of organizations is indispensable. This topic focuses on applying ASP.NET technology to build a website for the Center for National Defense and Security - Thai Nguyen University, with the aim of enhancing information management efficiency, improving service quality, and supporting the university's scientific research process. The research method is based on a combination of theoretical principles of web development and practical application deployment. Through this, the topic aims to contribute a professional information management system for the Center for National Defense and Security, while providing a typical example of how to apply ASP.NET technology in practice.

**Keywords:** ASP.NET, website, information management, Center for National Defense and Security, Thai Nguyen University
