

Build a camera sales website using the Laravel Framework

Nguyen Nam Linh

Abstract: In business practice, online management and sales are increasingly gaining attention. This project aims to build a camera sales web system based on the Laravel Framework with the goal of optimizing transaction processes and providing a convenient shopping experience for customers. Through a combination of theoretical research and experimentation, the project will identify necessary technical requirements, design an appropriate database, develop the web application, and test the system. It is expected that the implementation of this project will bring many benefits to businesses in terms of management efficiency as well as enhancing competitiveness in the e-commerce market.

Keywords: Laravel Framework, camera sales, e-commerce website
