

Build a book reading app using React Native

Nguyen Cong Minh

Abstract: In the context of information digitalization and the strong development of mobile technology, building a book reading application is a highly practical solution. This project aims to design and implement a book reading system using React Native, a popular framework for cross-platform mobile applications. Through theoretical research and experimentation, the project will provide users with a unique experience when reading books on smartphones. The expected outcome of the project is to create a highly practical technical solution that meets the growing demand for accessing book content via mobile devices.

Keywords: React Native, reading app, framework, mobile technology
